

Search is not
search
anymore.

SEO has changed.

OLD MODEL

Search used to be a doorway.

search

click

website

NEW MODEL

Search is becoming an answer layer.

ask

answer

~~maybe click~~

GOOGLE CHANGED TOO

The ten blue links era is over.

The result page now answers before it routes.

AI OVERVIEW

A synthesized answer appears here,
stitched from multiple sources.

58-61%

reported organic CTR drop when AI
summaries appear

IMPACT

Ranking first
doesn't mean
getting chosen.

THE NEW GAME

Answer Engine

Optimization

Not just “rank my page.” More like “make me a source the answer trusts.”

TIP 1

Write answer blocks

SHORT ANSWER

This foundation is a good fit for teams that need vendor-neutral governance, production adoption signals, and a clear path for community participation.

Structure pages for extraction.

Answer

Here is the answer.

Evidence

Here is the proof.

Trust

Here is who wrote it and when.

TIP 2

**Make
comparison
and decision
content
explicit.**

REAL QUERIES

**Is this project production-ready?
How does it compare?
Who uses it?
Is it vendor neutral?**

WEAK

CLAIM

“Our project is production-ready.”

BETTER

EVIDENCE

“Adopters use this project in production for policy enforcement, multi-cluster operations, and cross-cloud deployment consistency.”

EVEN BETTER

Adoption stories

Named users, real deployments, actual constraints.

Governance proof

Maintainers, maturity, neutrality, release cadence.

Technical evidence

Docs, integrations, benchmarks, reference architectures.

TIP 3

Say the limitations,

out loud.

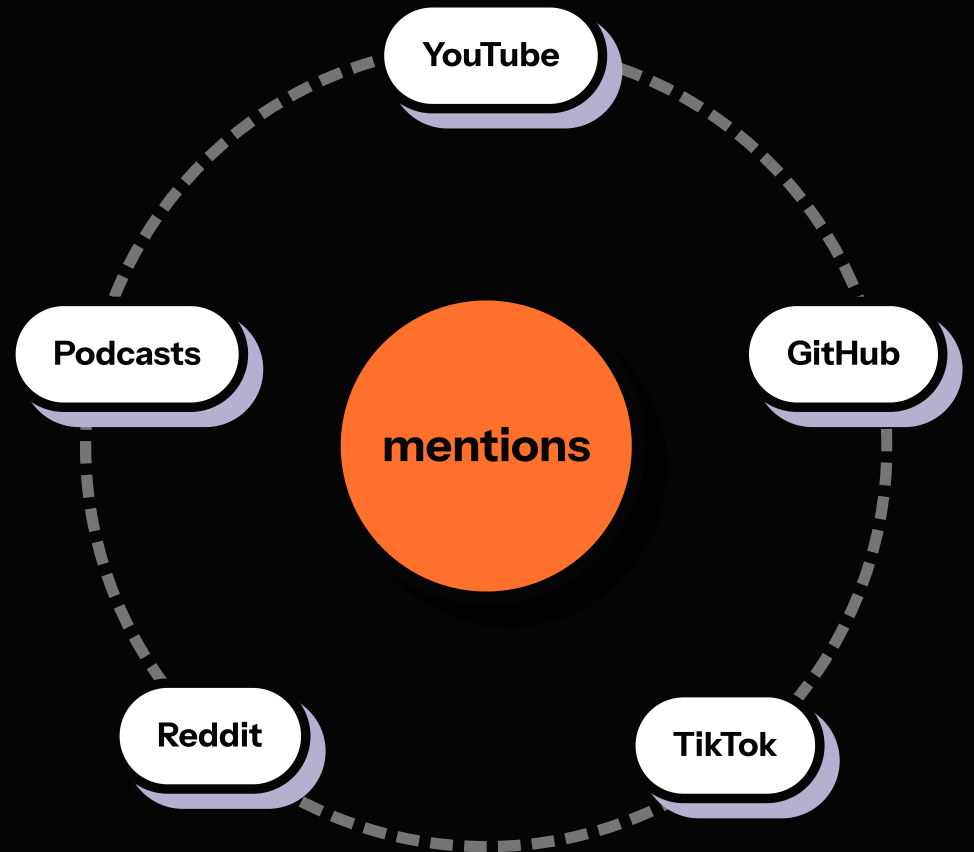

TIP 4

Build entity clarity.

Make it easy to know what bucket to put you in.

TIP 5

Get
mentioned
where AI
looks.

TIP 6

Monitor answer visibility,

not only rankings.

1. Cline (probably the best starting point)

- VS Code extension, fully open source
- Has **Plan → Act loop** (thinks, then executes changes)
- Can edit files, run commands, debug, browse, etc.
- Model-agnostic (Claude, Gemini, local via Ollama, etc.)

👉 This is one of the few that actually behaves like an **autonomous dev assistant**, not just a framework.

Cline

2/2

Cline

Top 11 Open-Source Autonomous Agents & Frameworks in 2025 - Cline Blog

Top 11 Open-Source Autonomous Agents & Frameworks in 2025

Developers are asking a simple question: which fully open-source coding agents are actually usable today? This list ranks the top autonomous agents and frameworks we tested across real repositories. It reflects an objective, hands-on view from Cline's editorial team. Cline appears at #1 because it's built specifically for day-to-day coding with local control, editor-native workflows, and model choice—while many alternatives are either general-purpose agent frameworks or research demos.

Agent / Framework	Primary Focus	Editor / Repo Integration	Ideal Use Case
Cline	Developer-centric, local-first coding agent	Full (editor + terminal integration)	Day-to-day repo work: fixes, refactors, tests, and feature shipping
OpenDevin	Research-grade end-to-end autonomy	Sandboxed environment	Experimental autonomy and benchmark testing
SuperAGI	General-purpose agent platform	Configurable toolchains	Building custom multi-agent systems or dashboards
AutoGPT	Goal-driven autonomous tasking	Minimal	Quick experiments and single-task automation
AutoGen (Microsoft)	Framework for multi-agent orchestration	Requires custom engineering	Enterprise teams designing bespoke agent infrastructure
CrewAI	Role-based	Moderate	Multi-role workflows (PM →

what are good conferences to learn about mcp

✦ AI Overview

The best conferences and events to learn about the **Model Context Protocol (MCP)** in 2026 are focused on the rapidly growing ecosystem around AI agents, data connections, and standardized tools. These events are heavily driven by the Linux Foundation and community partners like Anthropic and Microsoft. MCP Manager +3

Here are the top conferences to learn about MCP:

1. Dedicated MCP & Agentic AI Events

- **MCP Dev Summit North America (April 2-3, 2026 | New York City):** This is the flagship Linux Foundation event, featuring speakers from Anthropic, Google, and Goose. It covers production implementations, security, and enterprise integration. MCP Manager +3
- **MCP Dev Summit Europe (Sept 17-19, 2026 | Amsterdam):** The European counterpart to the NYC event, focusing on regional adoption, security, and interoperability. MCP Manager
- **Agentics Day: MCP + Agents (March 23, 2026 | Amsterdam):** A half-day event co-located with KubeCon + CloudNativeCon Europe, covering real-world MCP implementations and enterprise integration. MCP Manager
- **MCPconference (Global Series):** A series of community-organized events (London, Paris, Berlin, NYC, San Jose, Singapore) bringing together developers to share best practices on building with MCP. MCP Manager
- **MCP Connect Day (Ongoing):** A recurring, grassroots community series often organized via Luma, providing a "pulse check" on local MCP innovation and
